As a result, the following recommendations are made:

- The first step is to identify the specific needs of the target population. This can be done through surveys, focus groups, and other research methods.
- Once the needs are identified, the next step is to develop a plan of action. This plan should include specific goals, timelines, and resources required to address the needs.
- It is important to involve the target population in the planning process. This can help ensure that the plan is tailored to their specific needs and concerns.
- Finally, it is essential to evaluate the effectiveness of the plan. This can be done through follow-up surveys, interviews, and other methods to assess the impact of the interventions.
